

Providing Optimal Answers to Manufacturing Challenges

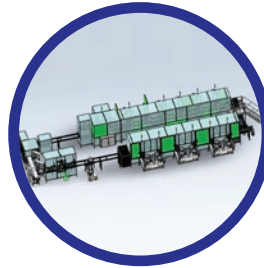

We deliver consistency and results with discrete manufacturing answers to manufacturing challenges. Our clients benefit from our custom automated assembly systems that produce parts in any volume or level of complexity.

TRI-MATION
Ingenuity. Quality. Results.

Maximize Your Productivity, Efficiency and Value

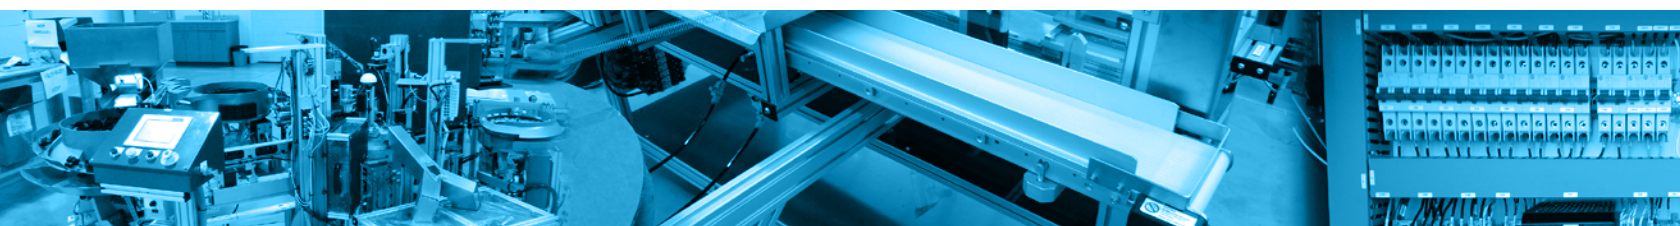

Our highly adaptable automated assembly systems are custom engineered to deliver high-quality results:

- Reduce costs
- Improve quality, efficiency and profitability
- Maximize productivity
- Provide modularity and flexibility for ongoing efficiency and future growth

In-House Design and Engineering Ingenuity

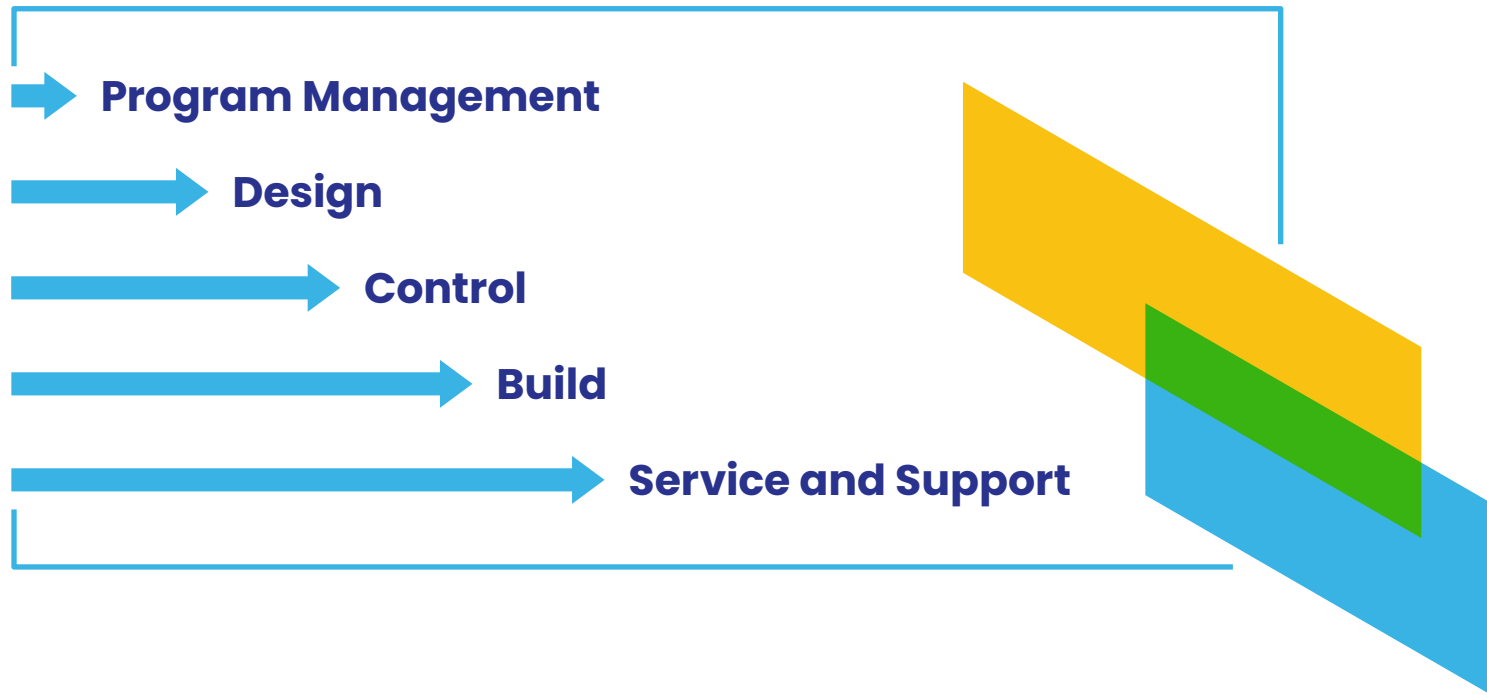

Our on-staff team of 50+ problem-solving experts includes the following specialties:

- Technically capable sales engineers
- Certified machine safety experts
- Dedicated program managers assigned to every job

Vertically-Integrated for Superior Quality Control

Unlike many of our competitors, we perform almost every operation from start to finish in-house. This allows us to deliver higher quality in the following areas:

Build More Value into Every Project

Phase 1

- Design and planning of mechanical, electrical and control systems
- Procurement, fabrication and assembly of automation system and controls

Phase 2

- Integration and testing of fully automated assembly machine
- Delivery, installation and testing on-site at your facility

Phase 3

- On-site operational training and documentation closeout
- Ongoing service, maintenance, system upgrades and technical support

Transform Your Next Assembly Automation Project

The success of our automated assembly solutions is driven by an understanding of your specific goals, including productivity, budget and timing. Contact the Tri-Mation team today to see how our expertise and ingenuity in custom automation machinery can build more value, productivity and efficiency into every project.

Increase Performance and Productivity

We engineer, design and build automated assembly solutions for a wide range of manufacturing industries, including:

- Automotive
- Robotics
- Electrical
- Medical
- Office furniture
- Plastics
- Consumer goods
- Sporting goods
